# DIY Hologram

You will need:

1. A piece of plastic sheeting (about 0.5mm thick). You could use some left over packaging!
2. A printer (for this template!)
3. Scissors or preferrably a craft knife
4. Clear cellotape
5. A smartphone or tablet to play the holograms!

1. Print out this template and tape your clear plastic down onto it to hold it in place. If this is going to be some trouble, you can trace the template with a felt tip. Cut out the outer shape of the template with your craft knife or scissors.

2. Score along the marked edges with your scissors or craft knife (it helps to use a ruler to keep your knife/scissors straight!). Make sure not to cut through the plastic, just to mark it. This will make it easier to fold later.

3. Fold along the scored edges and build the pyramid. Close the loop with some sticky tape.

4. Place on your smartphone and watch the holograms!
